ABOUT THE GAPFRAME

PLANET

1. BIODIVERSITY
2. CARBON QUOTIENT
3. OCEANS
4. LAND & FORESTS
5. CLEAN AIR
6. WATER
7. CLEAN ENERGY
8. WASTE TREATMENT

SOCIETY

9. HEALTH
10. EQUAL OPPORTUNITY
11. EDUCATION
12. LIVING CONDITIONS
13. SOCIAL INTEGRATION
14. QUALITY OF LIFE

ECONOMY

15. EMPLOYMENT
16. RESOURCE USE
17. SUSTAINABLE CONSUMPTION
18. SUSTAINABLE PRODUCTION
19. INNOVATION

GOVERNANCE

20. PUBLIC FINANCE
21. STRUCTURAL RESILIENCE
22. PEACE & COOPERATION
23. BUSINESS INTEGRITY
24. TRANSPARENCY

The GF is a normative framework designed to give practical support to everyone working towards a sustainable and safe future.

The GF translates the 17 Global Goals into relevant and measurable issues for each nation. It introduces a target 'safe space' where we can all live well within the limits of the planet and maps the current state of the world against the ideal state, highlighting the gap which needs to be closed in order to bring the world to a safe space.

The 'safe space' is presented in terms of 4 sustainability dimensions; Planet, Society, Economy and Governance, incorporating 24 underlying issues, tracked by a meticulous selection of 68 indicators from international sources.

The GF provides a view of the current state of the world from the perspective of a country, region, issue and sustainability dimension, and highlights priority areas, which need to be tackled in order to get the world to a safe space.

The GF provides a concrete starting point for strategic discussion on sustainability and an effective decision-making tool to help business, government and education to focus on activities that can produce the best outcomes in closing the gap and reaching a safe space for all.

The GF scale

In the GAPFRAME, the performance of countries, regions and the world is measured on the 0–10-point color scale.

The GF scale is inspired by the idea of a "safe operating space" as developed by Raworth (2012). The model suggests that there is certain safe space within which humanity must operate, considering both outer planetary boundaries as well as certain minimum levels of social achievements to ensure that all 9 billion citizens can live well on one planet. (WBCSD, 2010)

Towards Ideal	8.9-10
Safe Space	7.5-8.8
Watchlist	6.7-7.4
Critical	5.1-6.6
A Threat	0-5.0

GAPFRAME Score Scale

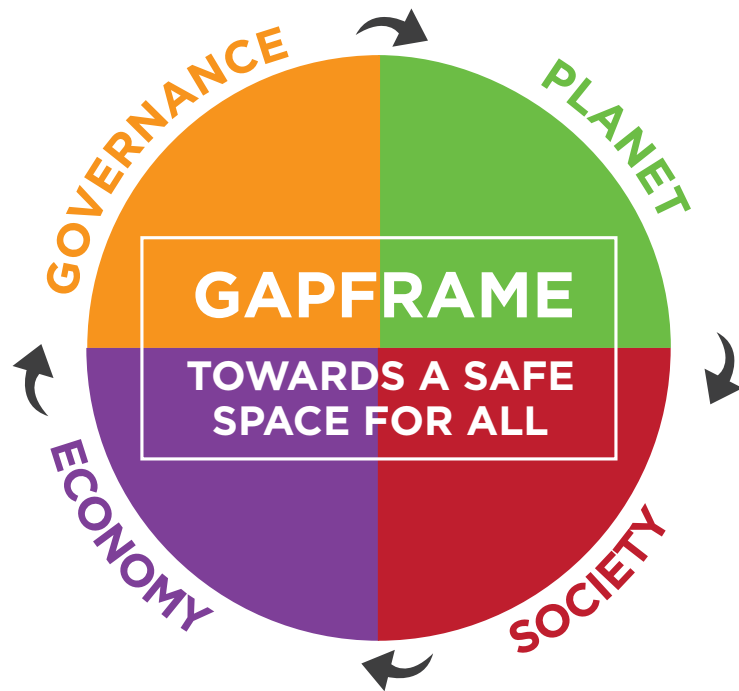

Rather than a 0–10-point scale, GF defines a “safe space” lying between a minimum required value WATCHLIST and an IDEAL state. Hence, the “safe space” does not represent the maximum or ideal value, but it can be considered as “good enough” for the future state to be attained. With the “safe space” being central for the GAPFRAME scale, we defined the GAPFRAME classification levels as follows: A THREAT (0–5.0; grey), CRITICAL (5.1–6.6; red), WATCHLIST (6.7–7.4; yellow), SAFE SPACE (7.5–8.8; green) and TOWARDS IDEAL (8.9–10; blue).

“Ranking by lowest of the four-dimensional scores reflects a strong sustainability approach.”

The GF score

The GF Index score is defined as the lowest value of all four GF dimensions: Planet, Society, Economy and Governance.

This deliberate decision to rank by lowest of the four-dimensional scores reflects a strong sustainability approach, implying that one dimension should not be improved at the cost of another dimension.

ABOUT THE GAPFRAME REPORT 2018

“We explored over a dozen indicators to find connections, correlations and divergences between the GF and globally recognized indexes.”

The 2018 GAPFRAME Report is the result of over six months of work comparing the GF to a number of the world's recognized indexes and in turn compiling in-depth country profiles for 155 nations. The GF data was compared to five global indexes, including: The SDG Index, The Human Development Index, The Ecological Footprint, The Social Progress Index and The Happiness Index. The study involved exploring over a dozen indicators in order to find connections, correlations and divergences between the GF and globally recognized indexes.

The first GAPFRAME Report issued in July 2017, presented a compelling view of the world. It exposed national and regional priority issues, and the gap we have to close in order for us to live well within the boundaries of this planet. In the 2018 Comparison Report, we dig deeper to discover what the GF can tell us in relation to other world indexes.

The report has been compiled by Katrin Muff PhD, Professor in Sustainability, Responsibility and Transformation, Business School Lausanne, and Agnieszka Kapalka PhD, Research Associate in Sustainability, Responsibility and Transformation, Business School Lausanne.

EXECUTIVE SUMMARY

“As people and countries develop, many do so at the expense of the planet and as a result, progress can become a cause for the deterioration of the environment.”

Comparing the GF to five relevant and recognized global indexes has brought interesting discoveries. Echoed throughout the comparisons is the fact that as societies and countries develop, many do so at the expense of the planet and as a result, progress can become a cause for the deterioration of the environment.

However, there is hope. The comparisons reveal that societies can progress without extensive depletion of the earth's natural resources. Costa Rica, Nepal, and Gambia are doing just that. To ensure sustainable progress, it will take a conscious effort by individual nations to focus on a balanced progression on all four sustainability dimensions: Planet, Society, Economy and Governance.

While it may be tempting for high-ranking nations in any one of the global indexes to feel proud of their achievements, this report demonstrates that advancement in individual areas or goals does not necessarily contribute to the well-being of the planet. Countries such as USA and Switzerland are top performers in the global indexes however, their failure to address environmental challenges see them positioned much lower in the GF.

In order to get the world to a safe space it is crucial that nations progress on all four GF dimensions while taking care that one dimension is not sacrificed at the expense of another. The GF provides a complete view of a nation's progress and is a valuable compass for the world on its journey to a sustainable and just future.

COMPARING THE GF TO GLOBAL FRAMEWORKS

INTRODUCTION

“The main factor influencing a country performance, independent of wealth or development status, is its conscious decision on how to balance priorities. Deciding to develop society and the economy at the expense of environment- or not.”

In order to try to discover what factors influence a country's performance and their capacity to develop in a sustainable way, we started comparing the GF to other global indexes.

Starting with the SDG Index, we checked the influence of size and wealth on countries GF and SDG performance. From these quick (first-level) comparisons, we realized that small, rich countries perform well in the GF and SDG Index. These results were surprising. Is it true? Is wealth and development status an ultimate condition to reach SAFE SPACE?

A series of new comparisons of the GF to other indicators (The Ecological Footprint, the Human Development Index, The Social Progress Index and the World Happiness Index), brought new discoveries. When looking more in-depth, we identified some exceptional countries. These role models show that a country can develop in a sustainable way, independently of its development status, or level of wealth. Economic progress does not have to be linked to deterioration of the planet.

If other countries could learn from these leaders, we can have hope that the world can indeed progress towards a safer space while ensuring the development of all nations.

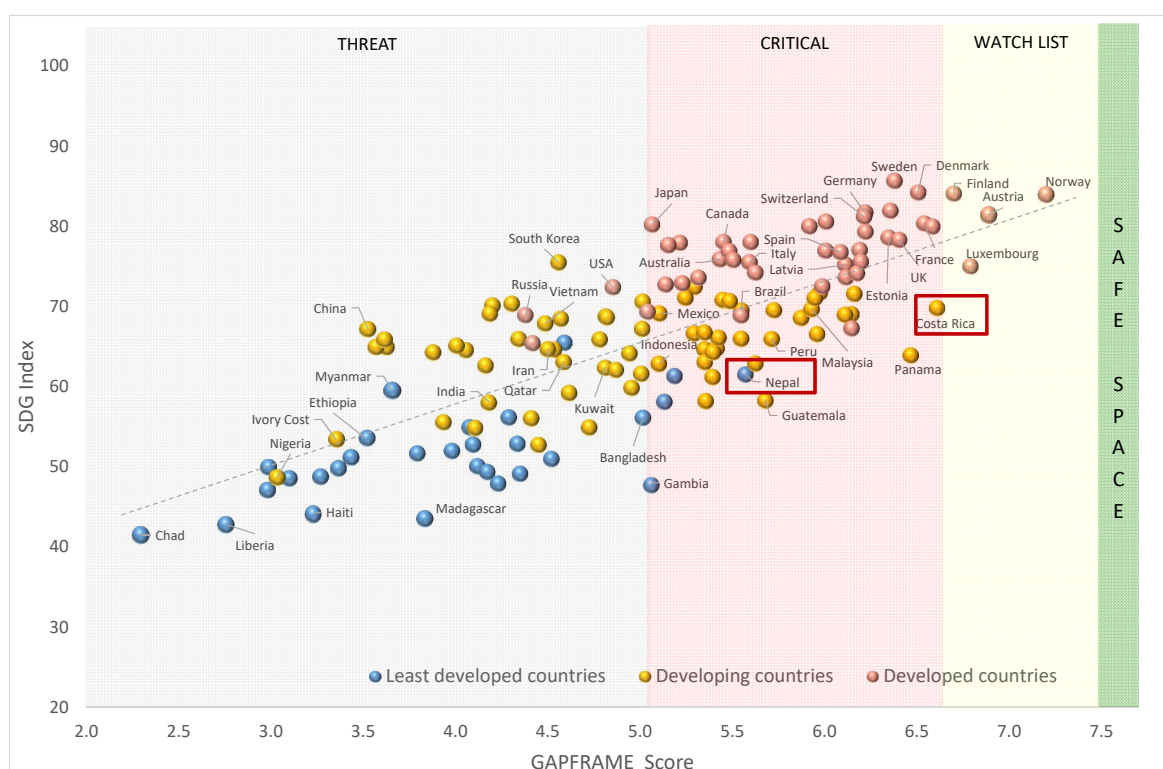

Finally, we concluded that the main factor influencing a country's performance, independent of wealth or development status, is its conscious decision on how to balance priorities. Deciding to develop society and the economy at the expense of environment - or not.

COMPARING THE GAPFRAME TO THE SDG INDEX

THE IMPORTANCE OF THE CONCEPT OF STRONG SUSTAINABILITY

Where the GF differs from the Sustainable Development Solutions Network (SDSN) SDG Index is that it compares countries to an ideal state of the world rather than against each other. How does this difference reflect when comparing the country performance across both frameworks?

Comparing the country rankings of the GF and the SDSN report, there is a good correlation of the results (see Figure 1). The top ranking countries in the SDG Index also appear in the GF top rankings. In both indexes, *developed countries* (red) perform better than *developing* (yellow) or *least developed* (blue) countries. In the GF, *developed countries* are closer to achieving the safe space and in the SDSN SDG Index, they are closer to achieving the Agenda 2030.

Comparison of the SDG Index and GF Data (Fig 1)

Comparably stronger GF performers show capacity to balance priorities

Nepal and Costa Rica stand out with a significantly better performance in the GF (ranked 46 and 5 respectively) than in the SDG Index (105 and 53). Both countries rank top in their GF geopolitical regions. What do these countries have in common, and what drives them closer to safe space? In brief: what are they doing right?

While neither country has all its issues under control (no country does!), both have well-balanced results across the four sustainability dimensions (governance, economy, planet, society). They have been able to reach their current state of development, without sacrificing the environment or societal concerns, unlike most other developed countries.

Comparatively weaker GF performers have an issue with “Strong Sustainability”

Not many countries are able to show such balanced priorities across all four sustainability dimensions. Take for example the USA, ranking 42nd on the SDG index. The country comes only 89th in the GF. Although USA have the Economy and Society dimensions in GF WATCHLIST, its Planet dimension is in the GF THREAT. This indicates that the country economic and social development have come at the expense of environment. The SDG index reflects a similar state. While the USA also performs poorly across the environment related SDGs, the country’s SDSN SDG Index rank is impressive. Too much so?

The difference in USA’s ranking in the GF (89) and the SDG index (42) demonstrates how weak sustainability can often lead to a false sense of ‘doing all right’. In the GF, the poor performance of USA in the Planet dimension cannot be compensated by better results in Economy and Society dimensions. The fact that USA performs very well across SDG 3, 4, 6 and 8, places it in 42nd position in the SDG Index ranking. How relevant is such a position for a developed country that has very different priorities to resolve than the general Global Goals of the SDGs?

The GF provides further information for every country across all dimensions and stresses the importance of “Strong Sustainability” - One dimension cannot be sacrificed for the development of another. An issue that every single developed country faces.

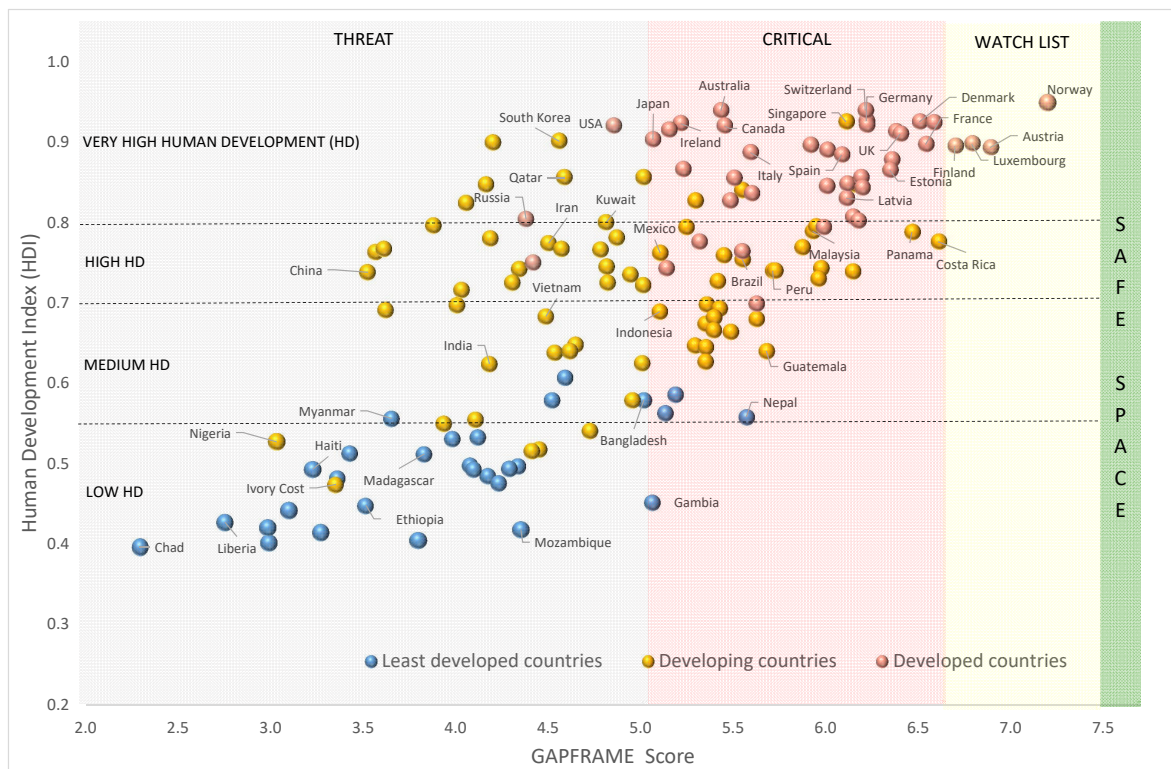

SUSTAINABLE DEVELOPMENT GOALS

COMPARING THE GF TO THE HUMAN DEVELOPMENT INDEX

IT WILL TAKE MORE THAN HUMAN DEVELOPMENT TO GET THE WORLD TO A SAFE SPACE

The United Nations Human Development Index (HDI) has been assessing human development for the past 37 years. Comparing GF with the HDI allows us to discover connections between human development and the multi-faceted journey to a safe space.

Comparison of the HDI and GF Data (Fig 2)

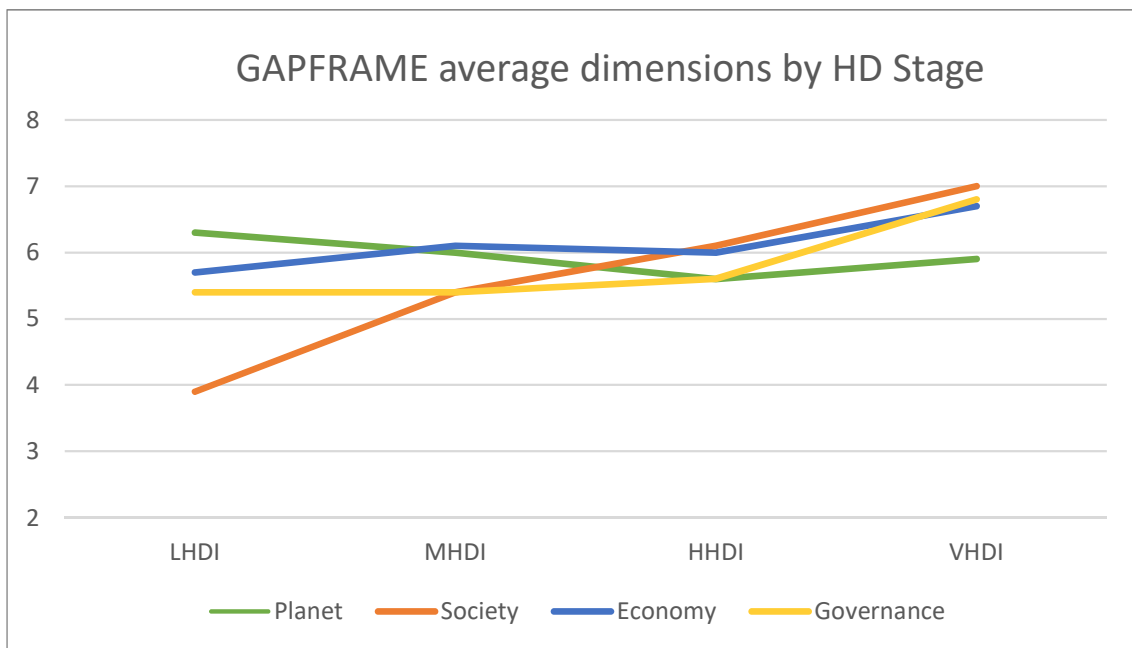

For countries placed in the high human development, 47% have a GF score in GF THREAT and 53% in GF CRITICAL. Even among nations scoring very high human development, only 9% have reached GF WATCHLIST, with 72% in GF CRITICAL and 19% remaining in GF THREAT.

It is clear that high human development alone will not be enough to get the world to a safe space.

When we look closer at the HDI levels from a GF perspective, there are some interesting revelations: **as human development increases, the world makes progress towards safe space.** Looking at the GF scores for each human development level, we notice a shift from GF THREAT to GF CRITICAL as we move from low to very high human development.

We want to explore why human development is only part of the answer to getting all of us to a safe space. For this, we evaluate which of the GF dimensions are dominant across the four HDI levels. Comparing the priority dimensions facing countries as they mature in human development is revealing—as countries grow in human development, they demonstrate an ability to tackle priority issues. However, as people and countries develop, they often do so at the expense of the planet (environment) and suddenly the development becomes a cause for the deteriorating state of the environment.

Looking at the average score for each GF dimension as per HDI level, we are hoping to find further answers.

Average score of GF Dimensions per HDI level (Fig 3)

The results are clear: the GF Planet dimension is the only dimension to decrease in value across the human development categories. Society displays a massive improvement across the HDI levels whereas Economy and Governance dimensions remain stable.

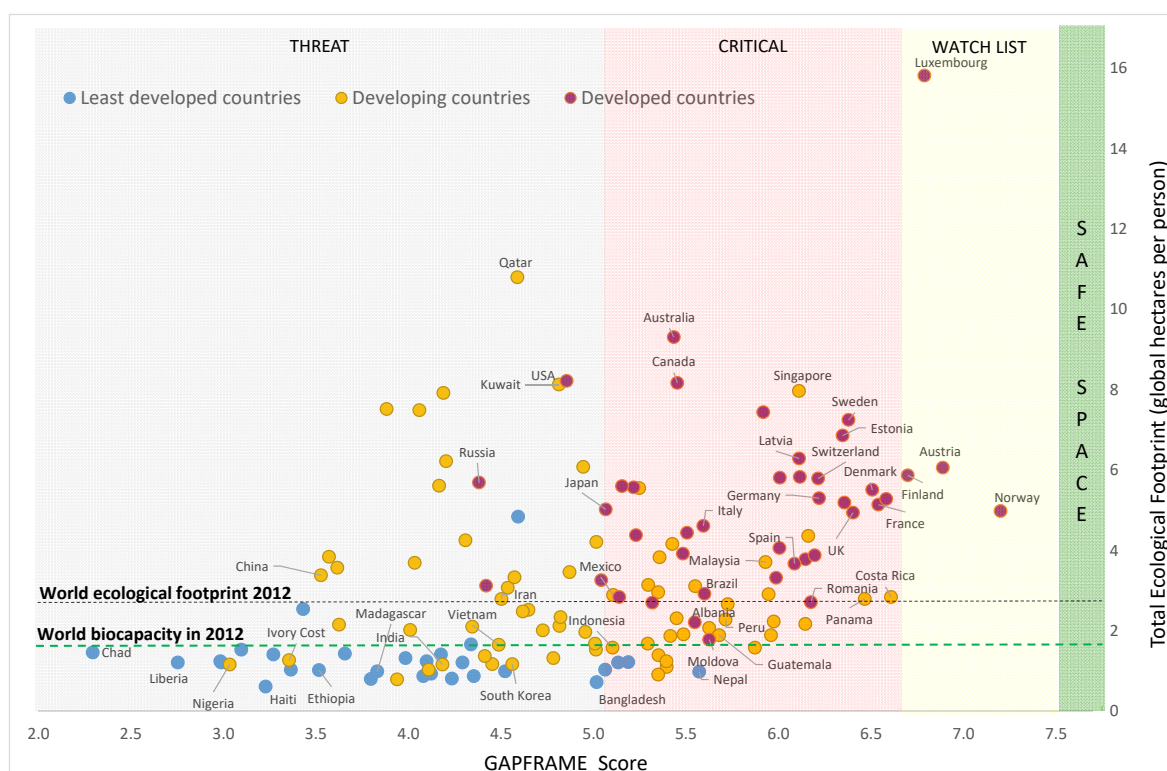

In short, these results confirm our previous conclusions: as society evolves, the environment deteriorates. We see that it will take more than human development to get the world to a safe space.

COMPARING THE GF TO THE ECOLOGICAL FOOTPRINT

OVERUSING THE PLANETS RESOURCES IS NOT A PREREQUISITE FOR PROGRESS

The Ecological Footprint measures the demand and supply of natural resources and maps the biocapacity of nations (what nature produces and absorbs) against their ecological footprint (what the nation consumes and the amount of waste it generates).

When comparing the GF to the Ecological Footprint, there are interesting insights of global importance. The comparison shows that it is possible for nations to progress in the dimensions of Society, Economy and Governance without exploding their ecological footprint. Geopolitical leaders in the GF such as Nepal, Costa Rica and Norway, demonstrate that overconsumption of natural resources is not a pre-requisite for progress.

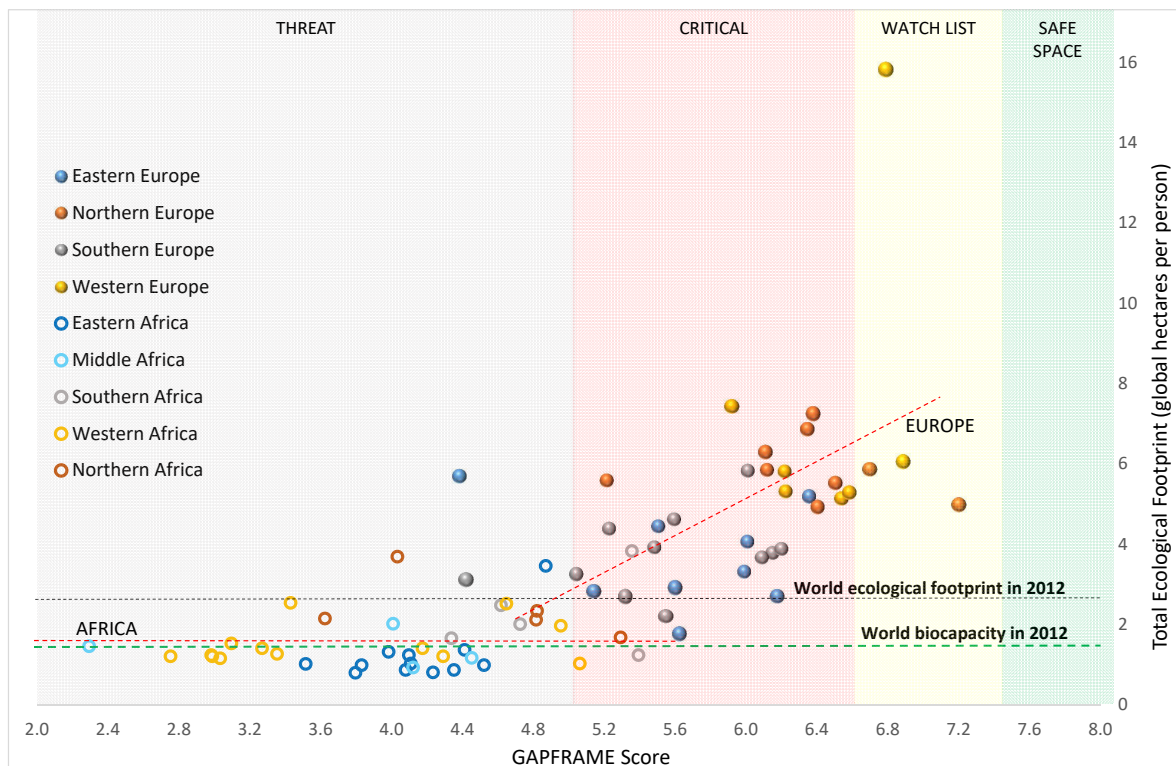

Comparison of the Ecological Footprint and GF Data (Fig 4)

Geopolitical Regions

The majority of *least developed* countries operate today within the limit of the World Biocapacity. These countries often struggle in dimensions like Society, Economy or Governance, placing them in the GF THREAT.

Many *developing* countries have increased their ecological footprint, as compared to *the least developed* countries (blue). However, countries like Indonesia, Guatemala or Peru, Panama and Costa Rica, managed to reach GF CRITICAL with relatively low ecological footprint.

In general, *developed* countries have high ecological footprints. However, Finland, Austria and Norway emerge as best practice countries. They are in the GF WATCHLIST and have lower ecological footprint, demonstrating that there are sustainable ways of achieving an advanced economic status.

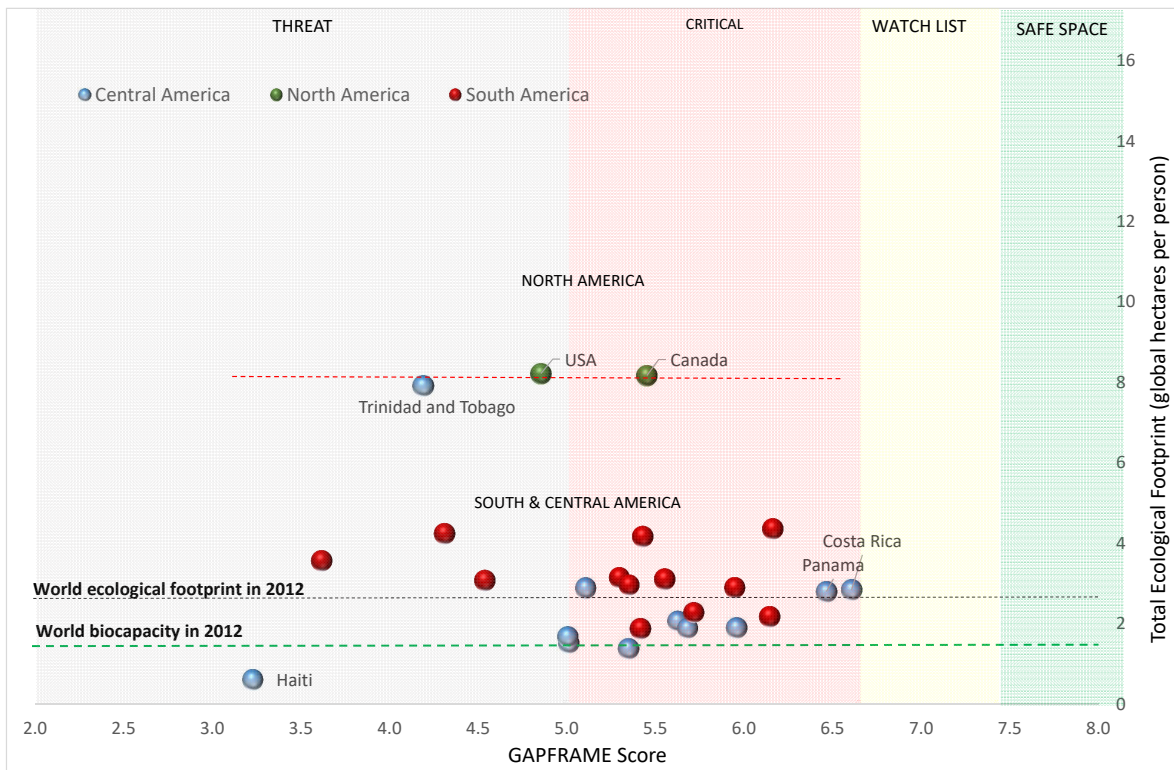

Comparison of the Ecological Footprint in Europe and Africa Data (Fig 5)

Regions

The European countries illustrate that focusing on economy, society and governance has resulted in sharp increase in the Ecological Footprint. As an example, Sweden and Estonia exceed the World Biocapacity limit up to 5 times and Norway up to 3 times, far from a sustainable growth. West & North European countries are the leading countries in the GF ranking. However, they have several environmental issues (priority dimension is Planet).

Contrarily, the African countries are spread on the GF scale horizontally, and progress without a significant Ecological Footprint increase.

Comparison of the Ecological Footprint in the Americas Data (Fig 6)

Central American countries are an interesting positive exception in terms of progression along the GF scale. These countries advanced their social, governance and economic dimensions while remaining within the World's Biocapacity.

Contrary to their Southern and Central American neighbors, the USA and Canada have developed their economic, social and governance dimensions at the expense of consuming up to around 6 times the Worlds Biocapacity, entirely unsustainable from an environmental point of view.

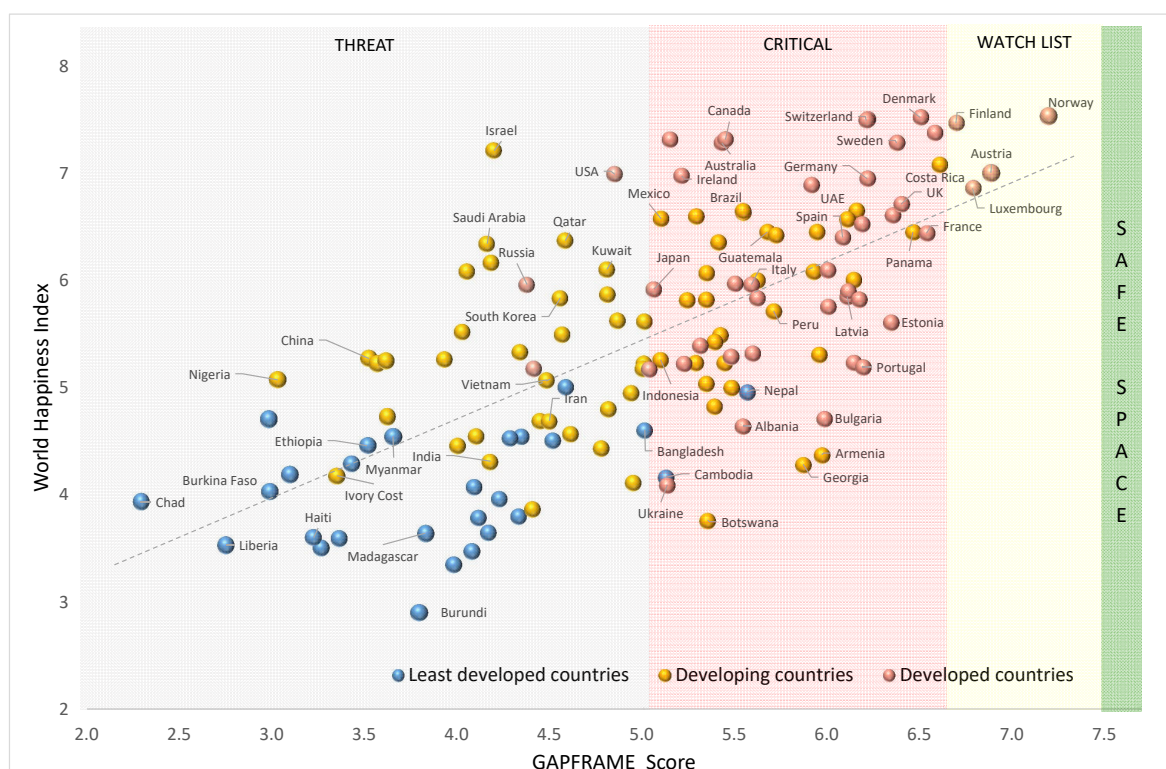

The GF highlights that Norway, Costa Rica and Nepal are the foremost countries in their geopolitical groups. The common denominator is that these countries have comparatively low Ecological Footprint. These leading GF countries have kept their total Ecological Footprint low, while having managed well-balanced results across all four sustainability dimensions, as we have discovered in the comparison of the SDG index. This revelation brings hope, **overusing the planets resources is not a prerequisite for Human Development.**

If other countries could learn from these global leaders, we can have hope that the world can indeed progress towards a safer space for all of us, while ensuring the development of all nations.

COMPARING THE GF TO THE HAPPINESS INDEX

THE HAPPIEST COUNTRY IN THE WORLD LEADS THE RACE TO SAFE SPACE

Although there is not a high correlation between the Happiness Index and the GF, one observation is striking: the happiest country in the world, Norway, is leading the race to the safe space. European countries, with the best GF performance, Finland and Norway, are the happiest countries, and countries at the bottom of the happiness index are mainly in GF THREAT.

Comparison of the Happiness Index and GF Data (Fig 7)

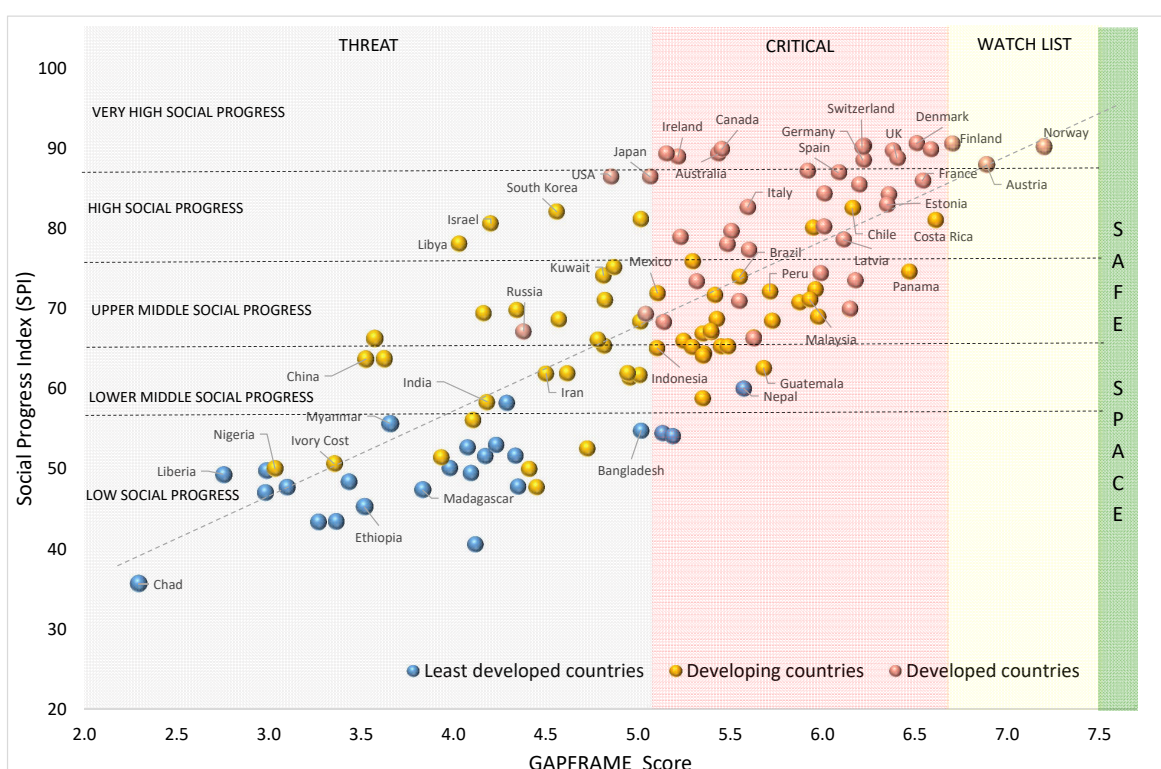

The countries development status does not directly correlate with their happiness. *Developed countries* such as Portugal, Bulgaria, Albania or Ukraine are equally as happy as *least developed countries* such as Nepal, Ethiopia or Bangladesh. On the other hand, *developing countries* such as Iran or India and *developed countries* like Germany, UK, Spain, Austria or Luxembourg are as happy as Mexico, Brazil, UAE or Costa Rica. It is clear that Development does not necessarily drive happiness.

However, we can ask if embracing a balanced approach to development can bring happiness? We think so. Leading GF countries like Norway, Costa Rica and Nepal all demonstrate a balanced approach to development with similar GF ranking in all four dimensions; this may well be a reason for their comparatively high happiness index score.

COMPARING THE GF AND THE SOCIAL PROGRESS INDEX

HIGH SOCIAL PROGRESS COUNTRIES HAVE INCREASED ABILITY TO ADDRESS SUSTAINABILITY ISSUES

There is relatively strong correlation between the GF and the Social Progress Index (SPI). However, countries such as USA, Australia, Canada and South Korea, and Israel perform better in the SPI than in the GF. Their low GAPFRAME raking (GF THREAT) reflects their inability to address the resources boundaries of the planet while progressing in social areas.

Comparison of the Social Progress Index and GF Data (Fig 8)

Nepal, Guatemala and Panama perform better in the GF than their peers in the SPI. These positive outliers achieve a balanced progress in all areas of the GF, progressing equally in Planet, Governance, Economy and Society.

Leading countries of the Social Progress Index are categorized in GF CRITICAL and GF WATCHLIST. This difference outlines that while these nations have progressed in areas of Society, Governance and Economy, they have significant challenges to address the planetary boundaries. We can be hopeful that with progress in three of the four GF dimensions, these high social progress countries may now be equipped to tackle the environmental challenges they face.

DEEP DIVE ON SELECTED NATIONS

INTRODUCTION

In this deep dive, we present a selection of countries who have reached their current state in distinctive ways.

This includes:

- Countries that have progressed in a sustainable and balanced way. These nations could be considered role models and can act as an inspiration for the rest of the world.
- Countries that have progressed in the areas of economy and society without paying attention to long-term environmental consequences.
- Countries that have not yet found their way. They are now in a position to choose how they will progress.

Examples of such countries can be found across all three geopolitical groups and across all regions.

NORWAY

TIME TO TAKE CARE OF THE PLANET

Norway is one of the best performing countries in the world. It is a top performing country in the GAPPFRAME, Happiness and Human Development Index. It takes 3rd place in the SPI and 4th place in the SDG Index. Norway is a small and rich country (8th in the GNI ranking). In the GF, Norway has the world's best performance in the Society dimension (score 8.15), with living conditions, education, equal opportunity, health, and quality of life in the GF SAFE SPACE and social integration in the GF WATCHLIST. The country reached very high human development (HDI) and very high social progress (SPI), especially in the domains of "basic human needs" and "foundation of wellbeing". Based on the SDG Index and the GF, we can notice that Norway prioritized Society over Environment. Both indices reveal that Norway should now concentrate on solving environmental issues, especially in the areas of waste treatment, land & forests and oceans health. Other critical aspects are the sustainable consumption and use of resources. The total ecological footprint of Norway exceeds ~2.8 times the World Biocapacity level. Although high, it is still lower than the ecological footprint of other developed countries, for example, Switzerland, Sweden, Austria, Ireland, USA, Estonia or Russia.

Norway leads the race to safe space. The remaining challenge for this country is to overcome the environmental challenges – respecting the limits of the planet while maintaining the high quality of life and well-being of society.

COSTA RICA

A LEADING LIGHT ON THE JOURNEY TO SAFE SPACE

Costa Rica comes 5th in the GF; 12th in the Happiness Index, 28th in the SPI, 53rd in the SDG and 66th in the HDI. Costa Rica is a small developing country. In the GF, Happiness and SPI Index, this country clearly outperforms, relative to its wealth and development status. Costa Rica has the Society, Economy and Governance dimensions in the GF WATCHLIST. Planet is in the GF CRITICAL but at the limit with the GF WATCHLIST (GF score: 6.6). Costa Rica prioritized the following issues in Society dimension: education and living conditions (both in the GF SAFE SPACE); in the Economy: resources use and sustainable production (GF TOWARDS IDEAL); in the Governance: Peace & Cooperation (GF TOWARDS IDEAL); and in the Planet: biodiversity, water and clean air (GF TOWARDS IDEAL). Moreover, Costa Rica has relatively low total ecological footprint; it exceeds ~1.5 times the World Biocapacity level.

Costa Rica has been able to reach its current state of development without sacrificing the environment or societal concerns, unlike most other developed countries. In the GF, Costa Rica is the best performing country in its geopolitical group and can be considered as a role model.

NEPAL

BALANCED PROGRESS

Nepal comes 46th in the GF, 91st in the SPI ranking, 99th in the Happiness, 105th in the SDG and 144th in the HDI. The country has reached medium human development (HDI) and lower middle social progress (SPI). Nepal has very low total ecological footprint, below the World Biocapacity limit. In the GF, Nepal is among the best performing countries in the “least developed” group (similar performance: Central African Republic, Togo, Niger - all have the GF score above 5.5). Nepal has extremely well-balanced performance across all 4 GF dimensions. Planet, Economy, and Society (5.8) and Governance (5.6). This indicates that Nepal progresses, respecting environment and society. Nepal outperforms on the GF relative to its wealth, and its development status (least developed country). It performs better than Japan or USA on the GF scale. The SDG index shows that Nepal performs well across SDG 1 (no poverty), SDG 12 (responsible consumption and production), SDG 13 (climate action). But it needs to improve across SDG 9 (industry, innovation and infrastructure), SDG 2 (zero hunger), SDG 7 (affordable and clean energy), SDG 8 (decent work and economy growth) and SDG 11 (reduced inequalities).

From the GF perspective, Nepal is the leading country in its geopolitical group. It has been able to reach its current state of development respecting both, environment and society. The country is on the right track towards safe space.

SWITZERLAND

INNOVATE TO EMBRACE ENVIRONMENT

A performing country on many indexes, 2nd in the HDI, 8th in the SDG index, 5th in the SPI and 4th in the Happiness Index, Switzerland comes only 16th in the GF. Switzerland is one of the smallest & richest countries in the world. The country reached very high human development (HDI) and very high social progress (SPI). In the GF, Switzerland reached the GF SAFE SPACE in the Governance, Economy and Society dimensions. Overall, Switzerland performs poorly in the GF ranking because of several environmental issues, such as clean energy, oceans, biodiversity and carbon quotient. SDG index indicates that Switzerland should improve mainly in the area of responsible consumption and production (SDG 12). The country has the total ecological footprint that exceeds ~3 times the World Biocapacity level (mainly due to a high level of the carbon footprint).

Switzerland has the capacity and the innovation power to decrease its environmental impact – which is a condition for the country to enter safe space.

IRELAND

FOCUSING ON PRIORITIES

Ireland comes 19th in the SDG Index ranking, 15th in the Happiness Index, 11th in the SPI, 8th in the HDI, and 70th in the GF ranking. Ireland is a small and relatively prosperous (13th in the GNI ranking) country. The country reached very high human development (HDI) and very high social progress (SPI). In the GF, Ireland reached the GF SAFE SPACE in the Society dimension. However, overall, Ireland clearly underperforms in the GF ranking (got only 70th place). That's mainly because of several environment-related issues that are in the GF CRITICAL. These include: carbon quotient, oceans, clean energy and waste treatment. As highlighted in the SDG Index, Ireland struggles mainly with SDG 14 (life below water), and SDG 12 (responsible consumption and production). Ireland has the total ecological footprint that exceeds ~3 times the World Biocapacity level (mainly due to a high level of carbon footprint and croplands footprint). The country has similar performance as Canada and Australia.

Ireland has reached its current state of development prioritizing economic and societal concerns. In its journey towards safe space, Ireland needs to now focus on reducing its environmental impact.

USA

IT WILL TAKE MORE THAN HUMAN DEVELOPMENT

USA is ranked 10th in the HDI, 18th in the SPI, 14th in the Happiness Index, 42nd in the SDG Index and 89th in the GF. USA is a prosperous country (11th in the GNI per capita ranking) and very populous (3rd in the ranking). USA underperforms on the GF relative to other developed and wealthy countries. The critical point is the Planet dimension. The main environmental issues are: biodiversity, carbon quotient, oceans, land & forests and waste treatment (all in the GF THREAT). The SDG Index indicates poor performance of USA across SDG 12 (responsible consumption and production), SDG 13 (climate action), SDG 14 (life below water) and SDG 15 (life on land). All those SDGs relate to the Environment. The total ecological footprint of USA exceeds ~4.5 times the World Biocapacity level (mainly due to a high level of carbon footprint). Contrary, USA performs relatively well in the GF Society dimension. The country reached very high human development (HDI) and high social progress (SPI). It covers well all the “basic human needs” (SPI) and performs well across SDG 3 (good health and well-being); SDG 4 (quality education); SDG 6 (clean water and sanitation) and SDG 8 (decent work and economic growth).

USA, being a prosperous and influential country, has all necessary resources and capacity to maintain the well-being of society while reducing its environmental impact.

GAMBIA

EMBRACING SOCIETY AND ECONOMY

Gambia comes 79th in the GF, 148th in the SDG and 173rd in the HDI ranking. Gambia is in the “least developed” countries group, with a low human development (HDI). Gambia has very low total ecological footprint - below the World Biocapacity limit. In the GF ranking and compared to other countries in the “least developed” group, Gambia performs well. It has similar performance as the WORLD (its GF score is 5.1 and its priority dimension is Governance). Gambia performs relatively well in the Planet dimension and has the carbon quotient, oceans, clean air and water in the GF TOWARDS IDEAL. According to the SDG Index, Gambia performs relatively well across SDG 12 (responsible consumption and production) and SDG 13 (climate action). It performs very poorly across SDG 9 (industry, innovation and infrastructure), SDG 8 (decent work and economy growth), and SDG 7 (affordable and clean energy).

Gambia has reached its current state of development while preserving the environment (exemplary state of the planet!). In its journey towards safe space, Gambia needs to now focus on priorities in the society and economy dimensions.

INDIA

TOWARDS A BETTER WORLD

India comes 93rd in the SPI ranking, 116th in the SDG, 119th in the GF, 131st in the HDI and 122nd in the Happiness Index ranking. India is one of the countries with the highest population in the world (2nd in the population ranking) and it is relatively poor (124th place in the GNI ranking). The country has reached medium human development (HDI) and lower middle social progress (SPI). In the GF, India has the Society, Planet and Governance in the GF THREAT and Economy in the GF CRITICAL; The Society is the priority dimension. The SDG Index shows poor performance of India across SDG 2 (zero hunger), SDG 5 (gender equality), SDG 9 (industry, innovation and infrastructure), SDG 11 (sustainable cities and communities). On the positive side, India has very low total ecological footprint (below the World Biocapacity limit).

India is currently struggling in all four sustainability dimensions. The mobilization of forces is needed to move the country towards safe space.

CHINA

TAKING CARE OF THE PLANET AND WELL BEING OF SOCIETY

China comes 71st in the SDG ranking, 79th in the Happiness, 83rd in the SPI, 90th in the HDI, and 140th in the GF. China is the country with the highest population in the world. Compared to India, China has much higher GNI per capita. The country has reached high human development (HDI) and lower middle social progress (SPI). In the GF; China performs very poorly. It has the Planet and Governance in the GF THREAT and Economy and Society in the GF CRITICAL. Compared to India, China managed to lift the Society dimension to the GF CRITICAL but clearly at the expense of the environment. Compared to India, China has improved performance in the following areas: living conditions, education and equal opportunity. On average, however, China and India perform similarly (China: Average GF Score 4.9; India: Average GF Score 4.8;). The SDG Index is more favorable, placing China on the 71st position in the ranking, and indicating its good performance across SDG 1 (no poverty), SDG 3 (good health and well-being) and SDG 6 (clean water and sanitation). China has the total ecological footprint that exceeds ~2 times the World Biocapacity limit.

China has reached its current state of development prioritizing societal and economic concerns. To improve the well-being of society, and to enter safe space, China needs to put the environment & governance on its priority list.

RUSSIA

CATCHING UP WHILE BALANCING PRIORITIES

Russia comes 49th in the HDI and Happiness Index, 62nd in the SDG Index, 67th in the SPI, and 109th in the GF. Russia is relatively prosperous (50th in the GNI per capita ranking) and very populous (11th in the ranking). In the GF, Russia clearly underperforms relative to other developed countries. It has the Planet and Economy dimensions in the GF THREAT and Governance and Society in the GF CRITICAL. The total ecological footprint of Russia exceeds ~3 times the World Biocapacity level (mainly due to a high level of carbon footprint). The SPI indicates the lowest performance of Russia in: “Personal Rights”, “Tolerance and Inclusion”, “Health and Wellness” areas. Russia performs poorly across SDG 2 (zero hunger), SDG 9 (industry, innovation and infrastructure), SDG 10 (reduced inequalities) and SDG 16 (peace justice and strong institutions). At the same time, Russia reached very high human development (HDI) and performs relatively well across SDG 1 (no poverty), SDG 4 (quality education); SDG 6 (clean water and sanitation), SDG 7 (affordable and clean energy), and SDG 11 (sustainable cities and communities).

Russia, being a prosperous country, has the capacity to improve its performance across all four sustainability dimensions, to catch up with its peers and to reach safe space.

COUNTRY PROFILES

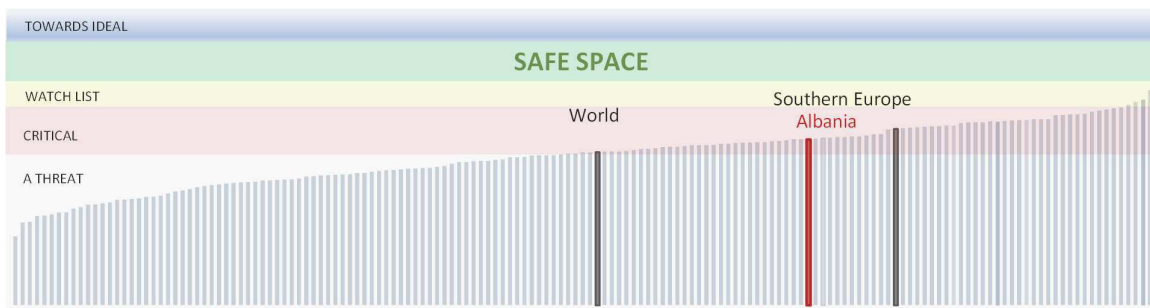

A go-to-resource for everyone working on sustainability issues. The GF two-page in-depth country profile shows where a nation is currently positioned on its journey towards safe space. These at-a-glance profiles provide a closer look at the indicators behind the GF issues and highlights where a nation stands in relation to its peers and in relation to other global indexes.

155 country profiles were compiled based on meticulously selected indicators coming from publicly available, reputable and trustworthy sources – known for rigorous data collection and frequent updates. The full data collection methodology can be found in our latest publication: “Moving the world into a safe space – the GAPFRAME methodology” in *The International Journal of Management Education* 16 (2018) 349–369.

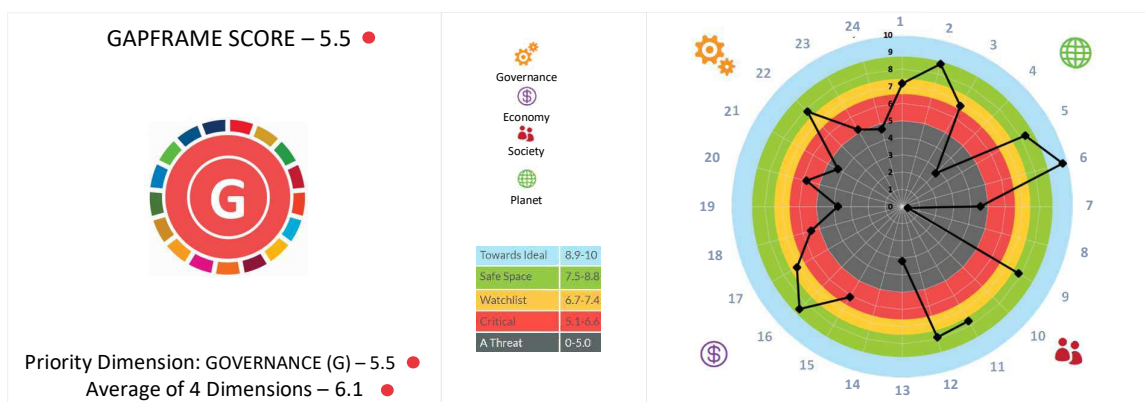

This report presents a highlight of the GAPFRAME story. Please visit www.GAPFRAME.org where you can uncover the status of 155 countries, 20 geographical and 3 geopolitical regions. Deep dive on the issues and uncover all the indicators and data behind the **GAPFRAME. Towards a safe space for all.**

PERFORMANCE BY PROXY INDICATOR - 24 ISSUES

The GAPFRAME translates the Sustainable Development Goals into relevant issues for all nations, adding and amending aspects where needed. The indicators were selected to compare a current performance versus an ideal state in the interest to define the gap to a safe space for all. They represent current best available proxies to illustrate the situation of all 24 issues. Resolving the proxy indicators is not necessarily identical with solving the issues.

PERFORMANCE BY PROXY INDICATOR - 24 ISSUES

The GAPFRAME translates the Sustainable Development Goals into relevant issues for all nations, adding and amending aspects where needed. The indicators were selected to compare a current performance versus an ideal state in the interest to define the gap to a safe space for all. They represent current best available proxies to illustrate the situation of all 24 issues. Resolving the proxy indicators is not necessarily identical with solving the issues.

PERFORMANCE BY PROXY INDICATOR - 24 ISSUES

The GAPFRAME translates the Sustainable Development Goals into relevant issues for all nations, adding and amending aspects where needed. The indicators were selected to compare a current performance versus an ideal state in the interest to define the gap to a safe space for all. They represent current best available proxies to illustrate the situation of all 24 issues. Resolving the proxy indicators is not necessarily identical with solving the issues.

PERFORMANCE BY PROXY INDICATOR - 24 ISSUES

The GAPFRAME translates the Sustainable Development Goals into relevant issues for all nations, adding and amending aspects where needed. The indicators were selected to compare a current performance versus an ideal state in the interest to define the gap to a safe space for all. They represent current best available proxies to illustrate the situation of all 24 issues. Resolving the proxy indicators is not necessarily identical with solving the issues.

PERFORMANCE BY PROXY INDICATOR - 24 ISSUES

The GAPFRAME translates the Sustainable Development Goals into relevant issues for all nations, adding and amending aspects where needed. The indicators were selected to compare a current performance versus an ideal state in the interest to define the gap to a safe space for all. They represent current best available proxies to illustrate the situation of all 24 issues. Resolving the proxy indicators is not necessarily identical with solving the issues.

PERFORMANCE BY PROXY INDICATOR - 24 ISSUES

The GAPFRAME translates the Sustainable Development Goals into relevant issues for all nations, adding and amending aspects where needed. The indicators were selected to compare a current performance versus an ideal state in the interest to define the gap to a safe space for all. They represent current best available proxies to illustrate the situation of all 24 issues. Resolving the proxy indicators is not necessarily identical with solving the issues.

PERFORMANCE BY PROXY INDICATOR - 24 ISSUES

The GAPFRAME translates the Sustainable Development Goals into relevant issues for all nations, adding and amending aspects where needed. The indicators were selected to compare a current performance versus an ideal state in the interest to define the gap to a safe space for all. They represent current best available proxies to illustrate the situation of all 24 issues. Resolving the proxy indicators is not necessarily identical with solving the issues.

PERFORMANCE BY PROXY INDICATOR - 24 ISSUES

The GAPFRAME translates the Sustainable Development Goals into relevant issues for all nations, adding and amending aspects where needed. The indicators were selected to compare a current performance versus an ideal state in the interest to define the gap to a safe space for all. They represent current best available proxies to illustrate the situation of all 24 issues. Resolving the proxy indicators is not necessarily identical with solving the issues.

PERFORMANCE BY PROXY INDICATOR - 24 ISSUES

The GAPFRAME translates the Sustainable Development Goals into relevant issues for all nations, adding and amending aspects where needed. The indicators were selected to compare a current performance versus an ideal state in the interest to define the gap to a safe space for all. They represent current best available proxies to illustrate the situation of all 24 issues. Resolving the proxy indicators is not necessarily identical with solving the issues.

PERFORMANCE BY PROXY INDICATOR - 24 ISSUES

The GAPFRAME translates the Sustainable Development Goals into relevant issues for all nations, adding and amending aspects where needed. The indicators were selected to compare a current performance versus an ideal state in the interest to define the gap to a safe space for all. They represent current best available proxies to illustrate the situation of all 24 issues. Resolving the proxy indicators is not necessarily identical with solving the issues.

PERFORMANCE BY PROXY INDICATOR - 24 ISSUES

The GAPFRAME translates the Sustainable Development Goals into relevant issues for all nations, adding and amending aspects where needed. The indicators were selected to compare a current performance versus an ideal state in the interest to define the gap to a safe space for all. They represent current best available proxies to illustrate the situation of all 24 issues. Resolving the proxy indicators is not necessarily identical with solving the issues.

PERFORMANCE BY PROXY INDICATOR - 24 ISSUES

The GAPFRAME translates the Sustainable Development Goals into relevant issues for all nations, adding and amending aspects where needed. The indicators were selected to compare a current performance versus an ideal state in the interest to define the gap to a safe space for all. They represent current best available proxies to illustrate the situation of all 24 issues. Resolving the proxy indicators is not necessarily identical with solving the issues.

PERFORMANCE BY PROXY INDICATOR - 24 ISSUES

The GAPFRAME translates the Sustainable Development Goals into relevant issues for all nations, adding and amending aspects where needed. The indicators were selected to compare a current performance versus an ideal state in the interest to define the gap to a safe space for all. They represent current best available proxies to illustrate the situation of all 24 issues. Resolving the proxy indicators is not necessarily identical with solving the issues.

PERFORMANCE BY PROXY INDICATOR - 24 ISSUES

The GAPFRAME translates the Sustainable Development Goals into relevant issues for all nations, adding and amending aspects where needed. The indicators were selected to compare a current performance versus an ideal state in the interest to define the gap to a safe space for all. They represent current best available proxies to illustrate the situation of all 24 issues. Resolving the proxy indicators is not necessarily identical with solving the issues.

PERFORMANCE BY PROXY INDICATOR - 24 ISSUES

The GAPFRAME translates the Sustainable Development Goals into relevant issues for all nations, adding and amending aspects where needed. The indicators were selected to compare a current performance versus an ideal state in the interest to define the gap to a safe space for all. They represent current best available proxies to illustrate the situation of all 24 issues. Resolving the proxy indicators is not necessarily identical with solving the issues.

PERFORMANCE BY PROXY INDICATOR - 24 ISSUES

The GAPFRAME translates the Sustainable Development Goals into relevant issues for all nations, adding and amending aspects where needed. The indicators were selected to compare a current performance versus an ideal state in the interest to define the gap to a safe space for all. They represent current best available proxies to illustrate the situation of all 24 issues. Resolving the proxy indicators is not necessarily identical with solving the issues.

PERFORMANCE BY PROXY INDICATOR - 24 ISSUES

The GAPFRAME translates the Sustainable Development Goals into relevant issues for all nations, adding and amending aspects where needed. The indicators were selected to compare a current performance versus an ideal state in the interest to define the gap to a safe space for all. They represent current best available proxies to illustrate the situation of all 24 issues. Resolving the proxy indicators is not necessarily identical with solving the issues.

PERFORMANCE BY PROXY INDICATOR - 24 ISSUES

The GAPFRAME translates the Sustainable Development Goals into relevant issues for all nations, adding and amending aspects where needed. The indicators were selected to compare a current performance versus an ideal state in the interest to define the gap to a safe space for all. They represent current best available proxies to illustrate the situation of all 24 issues. Resolving the proxy indicators is not necessarily identical with solving the issues.

PERFORMANCE BY PROXY INDICATOR - 24 ISSUES

The GAPFRAME translates the Sustainable Development Goals into relevant issues for all nations, adding and amending aspects where needed. The indicators were selected to compare a current performance versus an ideal state in the interest to define the gap to a safe space for all. They represent current best available proxies to illustrate the situation of all 24 issues. Resolving the proxy indicators is not necessarily identical with solving the issues.

PERFORMANCE BY PROXY INDICATOR - 24 ISSUES

The GAPFRAME translates the Sustainable Development Goals into relevant issues for all nations, adding and amending aspects where needed. The indicators were selected to compare a current performance versus an ideal state in the interest to define the gap to a safe space for all. They represent current best available proxies to illustrate the situation of all 24 issues. Resolving the proxy indicators is not necessarily identical with solving the issues.

PERFORMANCE BY PROXY INDICATOR - 24 ISSUES

The GAPFRAME translates the Sustainable Development Goals into relevant issues for all nations, adding and amending aspects where needed. The indicators were selected to compare a current performance versus an ideal state in the interest to define the gap to a safe space for all. They represent current best available proxies to illustrate the situation of all 24 issues. Resolving the proxy indicators is not necessarily identical with solving the issues.

The GAPFRAME translates the Sustainable Development Goals into relevant issues for all nations, adding and amending aspects where needed. The indicators were selected to compare a current performance versus an ideal state in the interest to define the gap to a safe space for all. They represent current best available proxies to illustrate the situation of all 24 issues. Resolving the proxy indicators is not necessarily identical with solving the issues.

🌍 PLANET

	Value	Rating
Biodiversity		
Extinction rate of animals	8.8	●
Protected terrestrial habitat areas	0.3	●
